LOCATION

Karachi, Pakistan

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML & CSS

Frameworks: Spring Boot, React.js, Bootstrap

Databases: MySQL

Tools: Git, GitHub, Docker

AI Tools:

Cursor

AI code generation, semantic codebase search, and rapid refactoring.

Claude Code

CLI agent for autonomous programming, code execution, and terminal testing/debugging.

Claude Platform

Orchestrating developer tools and complex subagent workflows.

ChatGPT & Gemini

Technical documentation writing, unit testing setups, and logic debugging.

OpenAI API

Integrating model inference and automation pipelines into backends.

EDUCATION

Bachelors in Software Engineering

Mohammad Ali Jinnah University

Intermediate - Pre-Engineering

SM-Govt College

Matriculation - Pre-Engineering

The Foundation Grammar School

LANGUAGES

English, Urdu

PROFILE

Dynamic and solutions-oriented Software Engineer with robust full-stack capabilities and three years of applied experience developing scalable web applications. Passionate about modernizing architectures, I specialize in transitioning backend-heavy systems to decoupled, responsive frameworks. I thrive at the intersection of complex problem-solving and intuitive user experience design, actively leveraging the Java Spring Boot ecosystem and modern frontend tools to build reliable, high-performance digital products. A collaborative team player committed to continuous learning and driving impactful technological innovation.

KEY PROJECTS

MASAIL - Community Issue Tracking & Crowdfunding Platform

- Developed a community-focused platform that enables residents to report, track, prioritize, and support local infrastructure issues such as damaged roads, sewerage problems, and street-light failures.
- Implemented role-based access control for Users, Verified Residents, Verification Officers, Field Officers, and Super Admins, with resident verification and controlled issue reporting.
- Built issue approval and campaign workflows with funding targets, quotations, community support, progress updates, and before/after evidence for transparent project tracking.
- Developed the backend using Java Spring Boot REST APIs, MySQL, authentication and authorization, and Docker.

MindCare - Digital Therapy Platform

- Architected and deployed a secure, full-stack digital therapy application by leveraging a robust Java Spring Boot REST API backend, MySQL database management, and a highly responsive React.js frontend.
- Designed and implemented a security-focused, anonymous authentication protocol using exclusive email-only verification to eliminate traditional username vulnerabilities.
- Developed core functional modules, including a dynamic, logic-driven triage questionnaire and a real-time session booking workflow to enhance user journey and scheduling performance.

Financial Fraud Detection System

- Engineered an analytical system utilizing Python and structured MySQL queries to ingest, parse, and monitor transactional records for anomalous and suspicious activity indicators.
- Optimized detection logic patterns to accelerate data processing workflows, showcasing advanced mastery of algorithms, proper data structures, and algorithmic problem-solving methodologies.

CRUD Library Management Engine

- Built a reliable relational database application using Spring Boot framework capabilities and a highly normalized MySQL schema layout.
- Streamlined administrative data workflows for managing dynamic book catalogs and user profiles, enforcing a clean codebase design through strict adherence to standard architectural design patterns.
