

Umair Khan

Software Engineer | Java & Spring Boot Backend Developer

Karachi, Pakistan | 0314 2712220 | kzumair939@gmail.com | linkedin.com/in/umairkhan28 | github.com/kzumair939

PROFESSIONAL SUMMARY

Junior Software Engineer focused on Java and Spring Boot backend development, with hands-on experience building REST APIs, authentication and authorization systems, and database-driven applications. Independently designed and built full-stack projects using Spring Boot, React, MySQL/MongoDB, and Docker, including role-based access control and JWT/OAuth2 authentication.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML, CSS
Backend: Spring Boot, REST APIs, WebSocket APIs, Authentication & Authorization, Role-Based Access Control
Frontend: React.js, Bootstrap
Databases: MySQL, MongoDB, SQL
Security: JWT, OAuth2 (Google), Authentication, Authorization, RBAC
Testing: JUnit, Postman, Integration Testing
DevOps & Tools: Docker, Docker Compose, Nginx, Git, GitHub
AI-Assisted Dev: Claude Code, Cursor, OpenAI API

PROJECTS

MASAIL — Community Issue Tracking & Crowdfunding Platform

Java, Spring Boot, React.js, MongoDB, Docker, Docker Compose, Nginx

- Independently designed and built a full-stack platform with 20+ REST APIs using Spring Boot and MongoDB to manage community issue reporting, verification, and crowdfunding campaign workflows.
- Implemented role-based access control across multiple user roles (residents, verification officers, field officers, administrators) to govern issue reporting, approval, and campaign management.
- Built issue approval and campaign workflows covering funding targets, quotations, and progress tracking, integrated with a React.js frontend.
- Containerized the application with Docker Compose across separate backend, frontend, MongoDB, and Nginx services for multi-service local deployment.

MindCare — Digital Therapy Platform

Java, Spring Boot, React.js, MySQL, WebSocket, JWT, OAuth2, JUnit, Postman

- Independently designed and built a full-stack therapy platform with 78 API endpoints (75 REST APIs and 3 WebSocket APIs) and a relational schema of 16 tables using Spring Boot and MySQL.
- Implemented authentication and authorization using JWT and Google OAuth2, combined with email verification and role-based access for therapists and users.
- Developed core modules including a logic-driven triage questionnaire, session booking, and real-time chat/video session functionality using WebSocket APIs integrated with a React.js frontend.
- Validated backend functionality with JUnit unit tests and Postman-based integration testing.

Financial Fraud Detection System

Python, MySQL

- Built a system to ingest, parse, and monitor transactional records using Python and structured MySQL queries to flag anomalous account activity.
- Implemented rule-based detection logic to identify suspicious transaction patterns through structured data processing techniques.

EDUCATION

Bachelor of Software Engineering

Mohammad Ali Jinnah University

CERTIFICATIONS

- Generative AI for Java & Spring — Coursera (2026)
- Spring AI — Simplilearn (2026)
- Claude Code in Action — Anthropic (Jun 2026)
